Motivation Letter

Dear Members of the Selection Committee,

I am applying for the Doctoral Researcher position in your Machine Learning group. Two years as a research assistant have shown me both sides of the research life: the craft of building reliable experiments, and the joy of a result that survives review. My first-author paper on calibrated ensembles began as a small calibration bug nobody wanted to own - and became the benchmark suite our institute now ships.

I want to deepen this into a doctorate: designing and analysing machine learning methods with the statistical seriousness they deserve. I bring PyTorch and JAX fluency, C++ where performance matters, and the habit of documenting everything so that others can reproduce it - open science as daily practice, not a slogan.

Supervising three bachelor students taught me that responsible supervision is mostly listening and structuring; I would be glad to assist in teaching again. Your group's interdisciplinary projects and its standards of scientific integrity are precisely the environment I am seeking.

Sincerely, Anna Kowalska
