Cover Letter

Dear Hiring Manager,

I am applying for the doctoral researcher position in your Machine Learning group. My route into machine learning went through physics: my Master's thesis on simulation-based inference for detector data is, at its core, applied deep learning, and writing it convinced me that I want to work on machine learning methods themselves rather than on detectors.

I offer strong probability theory and statistics, solid Python and NumPy, working knowledge of PyTorch, and the honesty of a trained experimentalist: I state what the data supports and what it does not. My communication experience comes from colloquium talks and from explaining inference methods to detector engineers.

I am realistic about my profile - no publications yet, and my machine learning depth is self-taught beyond the coursework - but I am ambitious, collaborative, and ready to grow inside a group that values scientific integrity.

Best regards, Felix Baumann
