Cover Letter

Dear Members of the Selection Committee,

I am writing to apply for the position of Doctoral Researcher in Machine Learning at your faculty. My Master's thesis on efficient attention mechanisms convinced me that I want to spend my doctoral years on the design, development, and analysis of novel machine learning methods rather than only applying them.

During two years as a student research assistant I learned how collaborative research works in practice: shared codebases, reproducibility checklists, and honest reporting of negative results. I presented our workshop paper myself and enjoy communicating technical content to both experts and non-specialists - a skill I sharpened while tutoring thirty students in the Machine Learning course.

Interdisciplinary collaboration attracts me in particular: your group's projects with medical imaging partners match my interest in methods that must work outside clean benchmark conditions. I strongly identify with your stated values of scientific integrity and open science; my thesis artifacts are publicly archived, and I documented every experimental decision in a preregistered log.

I would be glad to contribute Python, PyTorch, and JAX expertise, experience with statistical evaluation, and genuine enthusiasm for teaching assistance to your group.

Sincerely, Jana Weber
