Cover Letter

Dear Hiring Team,

after four years in industry I am applying for the Doctoral Researcher position in your Machine Learning group - because the questions that stayed with me through every product cycle are research questions. Why does the forecaster fail on new cities? What is the right uncertainty statement for a planner? I want to work on the design and analysis of machine learning methods themselves.

Industry has given me strengths a straight academic path does not always provide: I ship reliable Python and PyTorch systems, I design experiments with genuine statistical care, and I have presented model findings to executives, city administrators, and engineers - communication under real constraints. I mentor interns and enjoy it; supervision of students is one of the reasons I am drawn back to a university.

Your group's interdisciplinary projects on urban mobility match my data background exactly, and your open-science commitment mirrors how I already work: documented, reproducible, and honest about limitations.

Sincerely, Priya Sharma
