Motivation Letter

Dear Hiring Manager,

I am writing to apply for the Doctoral Researcher position in your Machine Learning group. My background is theoretical and computational physics, and my Master's work on Bayesian deep learning for particle tracking was the moment I decided that research in machine learning methods - not only their application - is what I want to do full time.

Physics taught me statistical rigour: honest error bars, controlled experiments, and the discipline of writing down what the data can and cannot support. I bring solid Python and NumPy experience, working knowledge of PyTorch, and the perseverance of someone who has debugged detector pipelines at three in the morning.

What draws me to your group is the interdisciplinary collaboration with medicine and mobility partners; explaining models to domain experts is communication I genuinely enjoy, as my outreach talks at public science nights have shown. Open science matters to me: I publish my analysis code and document my workflows.

Best regards, Sara Klein
