Dear Hiring Team,

I am applying for the Senior Data Engineer position at NovaGrid Energy. Balancing renewable grid load is exactly the kind of problem I enjoy: safety first, then reliable engineering, then everything else.

At GridWorks I own the telemetry platform end to end - from Kafka ingestion to dbt models to stakeholder dashboards. I communicated weekly with grid analysts and took accountability for the 99.95% pipeline SLA.

Sustainability drives me: I want my work to accelerate the energy transition.

Kind regards,
James Okafor
